Art Unit: 2665

1. In the specification, page 5, paragraph [0009], lines 3-5, 10-12, page 17, paragraph [0042], lines 4-5, the applicant is requested to provide the information regarding the serial number, title, inventor, filing date and update the status from time to time for the listed related co-pending application.

2. Claims 10-17, 21-26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 10, line 7, it is unclear as to what is intended to be the claim limitation by reciting "certain features" since it is unclear what "certain features" is referring to. Is it referring specifically to the power spectrum features as in claim 1?

In claim 21, lines 3-4, it is confusing for reciting "identifying bandwidth mismatches within the networks" since it is unclear whether the bandwidth mismatches occur between the nodes within a network or between networks.

3. Claims 1-9, 18-20 are allowed.

4. Claims 10-17, 21-26 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hluchyj et al., Chang et al., Wilson and Voce are all cited to show the common feature of congestion/connection admission control in a multi-nodal communication network similar to the claimed invention.

6. The following is an examiner's statement of reasons for allowance:

Art Unit: 2665

The subject matter of the claims is allowable over prior art of record because all prior arts fail to teach or fairly suggest a method for characterizing congestion within a traffic stream of interest in a communication network as self-induced congestion or cross-induced congestion by analyzing a correlation result of a time series of throughput data of the traffic stream of interest and making the characterization based on power spectrum features found in the correlation result as in claim 1. All prior arts also fail to teach or fairly suggest a method for analyzing a sample of throughput data for a traffic stream of interest in a communication network to produce a power spectrum of the sample and comparing the power spectrum to stored replicas of power spectrums of known congestion sources within the communication network to determine a source of congestion for the traffic stream of interest.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alpus H. Hsu whose telephone number is (571)272-3146. The examiner can normally be reached on M-F (5:30-3:00) First Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Huy D. Vu can be reached on (571)272-3155. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
